The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Amended claims 12-20, 28, 39, 41, 48, 50, 53, and 54, filed 7/8/05, are acknowledged.

REQUIREMENT FOR UNITY OF INVENTION

As provided in 37 CFR 1.475(a), a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in a national stage application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim. See 37 CFR 1.475(e).

When Claims Are Directed to Multiple Categories of Inventions:

As provided in 37 CFR 1.475(b), a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

- (1)A product and a process specially adapted for the manufacture of said product; or
- (2) A product and process of use of said product; or
- (3)A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or

(4)A process and an apparatus or means specifically designed for carrying out the said process; or

(5)A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

Otherwise, unity of invention might not be present. See 37 CFR 1.475(c).

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, 9, 12-21, 48-49, 53-56, and 61-66 drawn to a method of predicting at least one toxic effect of a compound, classified in class 700, subclass 30.

Group II, claim(s) 8, drawn to a method of predicting the progression of a toxic effect of a compound, classified in class 703, subclass 11.

Group III, claim(s) 10 and 46, drawn to a method of identifying an agent that modulates the onset or progression of a toxic response, classified in class 436, subclass 500.

Group IV, claim(s) 11 and 22, drawn to a method of predicting the cellular pathways that a compound modulates in a cell, classified in class 435, subclass 91.2.

Group V, claim(s) 23-29, drawn to a set of probes, classified in class 536, subclass 24.3.

Group VI, claim(s) 30-34 and 50-52, drawn to a solid support/array of probes, classified in class 435, subclass 283.1.

Group VII, claim(s) 35-45 and 47, drawn to a computer system, classified in class 702, subclass 19.

Group VIII, claim(s) 57-60, drawn to a method of identifying an agent that modulates at least one activity of a protein encoded by a gene, classified in class 435, subclass 7.1.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Groups I-IV, V-VI, VII, and VIII lack unity of invention because the groups do not share the same or corresponding technical feature. The technical feature of Groups I-IV is differential expression after exposure of genes to a compound. The technical feature of Groups V-VI is at least two probes. The technical feature of Group VIII is a user interface. The technical feature of Group VIII is a protein assay.

Groups I-IV lack unity of invention because even though the inventions of these groups require the technical feature of differential expression after exposure of genes to a compound, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of Greenspan et al. (US 2003/0166213 A1, paragraph 0013).

Groups V-VI lack unity of invention because even though the inventions of these groups require the technical feature of at least two probes, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of Greenspan et al. (US 2003/0166213 A1, paragraphs 0059, 0081, 0083).

Four Specie Election Requirements:

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species A: elect one gene among those listed in Tables 5A-5LL, for example, in claims 1, 3, 5, 7-11, 23, 30, 35, 41, 49, 57, 61, 63, 65

Species B: elect one toxic effect, for example, in claims 20 and 21

Species C: elect one toxin among those recited, for example, in claims 22 and 47

Specie D: elect one detection assay among those recited, for example, in claims 55 and 56

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument

that a claim is allowable or that all claims are generic is considered non-responsive unless

accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to

additional species which are written in dependent form or otherwise require all the limitations of

an allowed generic claim. Currently, claims 1-54 and 57-66 are generic.

The groups of inventions listed above do not relate to a single general inventive concept under

PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special tech-

nical features for the following reasons:

For the first specie election requirement, the claims lack unity of invention because even

though the inventions of these species require the technical feature of a gene, this technical

feature is not a special technical feature as it does not make a contribution over the prior art in

view of Greenspan et al. (US 2003/0166213 A1, paragraph 0013).

For the second and third specie election requirements, where a single claim defines

alternatives of a Markush group, the requirement of a technical interrelationship and the same or

corresponding special technical features as defined in Rule 13.2, is considered met when the

alternatives are of a similar nature. When the Markush grouping is for alternatives of chemical

compounds, the alternatives are regarded as being of a similar nature where the following criteria

are fulfilled:

(A) all alternatives have a common property or activity; AND

(B)(1) a common structure is present, that is, a significant structural element is shared by all

of the alternatives; OR

(B)(2) in cases where the common structure cannot be the unifying criteria, all alternatives

belong to a recognized class of chemical compounds in the art to which the invention pertains.

The phrase "significant structural element is shared by all of the alternatives" refers to cases

where the compounds share a common chemical structure which occupies a large portion of their

structures, or in case the compounds have in common only a small portion of their structures, the

commonly shared structure constitutes a structurally distinctive portion in view of existing prior

art, and the common structure is essential to the common property or activity.

The phrase "recognized class of chemical compounds" means that there is an expectation from

the knowledge in the art that members of the class will behave in the same way in the context of

the claimed invention, i.e. each member could be substituted one for the other, with the

expectation that the same intended result would be achieved.

For the fourth specie election requirement, the claims lack unity of invention because even

though the inventions of these species require the technical feature of a detection assay, this

technical feature is not a special technical feature as it does not make a contribution over the

prior art in view of Greenspan et al. (US 2003/0166213 A1, paragraph 0081).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention or species.

Should applicant traverse on the ground that the inventions have unity of invention (37 CFR 1.475(a)), applicant must provide reasons in support thereof. Applicant may submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. Where such evidence or admission is provided by applicant, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Application/Control Number: 10/541,937 Page 9

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993) (See 37 CFR §1.6(d)). The Central Fax Center number for official correspondence is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carolyn Smith, whose telephone number is (571) 272-0721. The examiner can normally be reached Monday through Thursday from 8 A.M. to 6:30 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marjorie Moran, can be reached on (571) 272-0720.
